A Forecasting one kick
Visible inputs
Launch anchor
Time-stamped positions
Observation model
Coordinate likelihood
Proposal correction
Flight propagation
Weighted D, S, E paths
Plane and ground events
Two outputs
First-event probabilities
Conditional goal map
B Calibrating and evaluating regions
Calibration only
Rank the true cell
Fit the cutoff
Test inputs only
Predict and lock
Apply fitted cutoff
Held-out scoring
Unmask reference
Score hit, area, error
